On general Eulerian integral of certain products of I-functions defined by

Nambisan and a multivariable Aleph-function

F.Y. AYANT

1 Teacher in High School, France

ABSTRACT
The object of this paper is to establish an general Eulerian integral involving the product of two multivariable I-functions defined by Nambisan et al [2], the expansion of multivariable Aleph-function and a generalized hypergeometric function which provide unification and extension of numerous results. We will study the particular case concerning the multivariable H-function.

Keywords: Eulerian integral, multivariable I-function, Lauricella function of several variables, multivariable H-function, generalized hypergeometric function

2010 Mathematics Subject Classification. 33C45, 33C60, 26D20

1. Introduction
In this paper, we evaluate a new Eulerian integral of most general characters associated with the products of two multivariable I-functions defined by Nambisan et al [2], the Aleph-function of several variables and a generalized hypergeometric function with general arguments. The Aleph-function of several variables is an extension of multivariable I-function defined by Sharma et al [3].

We define: \( N(z_1^{(m)}, \ldots, z_v^{(n)}) = N^{0,M_1,N_1,\ldots,M_v,N_v}_{P_1,Q_1,\tau_i;R_i,P_i^{(v)}_i,Q_i^{(v)}_i,\tau_i^{(v)}_i;R_i^{(v)};\ldots;P_{i(v)}^{(v)}_i,Q_{i(v)}^{(v)}_i,\tau_{i(v)}^{(v)}_i;R^{(v)}_i} \)

\[
[(a_j^{(1)}, \alpha_j^{(1)}), \ldots, (a_j^{(v)}, \alpha_j^{(v)})]_{1,n_i} ; \left[ \tau_i^f(b_j^{(1)}; \beta_j^{(1)}), \ldots, \beta_j^{(v)} \right]_{m+1,q_i} ;
\]

\[
\frac{1}{(2\pi \omega)^n} \int_{L_1} \cdots \int_{L_v} \psi_1(s_1, \ldots, s_v) \prod_{k=1}^v \xi_k(s_k) z_k^{m+v} \, ds_1 \cdots \, ds_v \tag{1.1}
\]

with \( \omega = \sqrt{-1} \)

\[
\psi_1(s_1, \ldots, s_v) = \prod_{j=1}^R \Gamma(1 - a_j + \sum_{k=1}^v \alpha_j^{(k)} s_k) \prod_{i=1}^N \Gamma(a_j - \sum_{k=1}^v \alpha_j^{(k)} s_k) \prod_{j=1}^N \Gamma(1 - b_j + \sum_{k=1}^v \beta_j^{(k)} s_k) \tag{1.2}
\]

and \( \xi_k(s_k) = \frac{\prod_{j=1}^{M_k} \Gamma(d_j^{(k)} - \delta_j^{(k)} s_k) \prod_{i=1}^{N_k} \Gamma(1 - c_j^{(k)} + \gamma_j^{(k)} s_k) \prod_{i=1}^{R_i^{(k)}} \Gamma(1 - d_j^{(k)} + \delta_j^{(k)} s_k) \prod_{i=1}^{P_i^{(k)}} \Gamma(c_j^{(k)} - \gamma_j^{(k)} s_k)}{\sum_{i=1}^{R_i^{(k)}} \tau_i^{(k)} \prod_{j=1}^{M_k} \Gamma(1 - d_j^{(k)} + \delta_j^{(k)} s_k) \prod_{i=1}^{N_k} \Gamma(c_j^{(k)} - \gamma_j^{(k)} s_k)} \prod_{j=1}^{N_k} \Gamma(1 - \gamma_j^{(k)} s_k)} \tag{1.3}
\]

ISSN: 2231-5373  http://www.ijmttjournal.org  Page 147
Suppose, as usual, that the parameters  
$$a_j, j = 1, \cdots, P; b_j, j = 1, \cdots, Q;$$

$$c^{(k)}_j, j = 1, \cdots, N_k; \gamma^{(k)}_j, j = N_k + 1, \cdots, P^{(k)};$$

$$d^{(k)}_j, j = 1, \cdots, M_k; \delta^{(k)}_j, j = M_k + 1, \cdots, Q^{(k)};$$

with $k = 1, \cdots, r$, $i = 1, \cdots, R$, $i^{(k)} = 1, \cdots, R^{(k)}$

are complex numbers, and the $\alpha$'s, $\beta$'s, $\gamma$'s and $\delta$'s are assumed to be positive real numbers for standardization purpose such that

$$U_i^{(k)} = \sum_{j=1}^{N_k} a_j^{(k)} + \tau_i \sum_{j=N_k+1}^{P^{(k)}} a_j^{(k)} + \sum_{j=1}^{N_k} \gamma_j^{(k)} + \tau_i^{(k)} \sum_{j=N_k+1}^{P^{(k)}} \gamma_j^{(k)} - \tau_i \sum_{j=1}^{Q^{(k)}} \delta_j^{(k)} - \sum_{j=1}^{M_k} \delta_j^{(k)}$$

$$- \tau_i^{(k)} \sum_{j=M_k+1}^{Q^{(k)}} \delta_j^{(k)} \leq 0 \quad (1.4)$$

The real numbers $\tau_i$ are positives for $i = 1$ to $R$, $\tau_i^{(k)}$ are positives for $i^{(k)} = 1$ to $R^{(k)}$

The contour $L_k$ is in the $s_k$-p lane and run from $\sigma - i \infty$ to $\sigma + i \infty$ where $\sigma$ is a real number with loop, if necessary, ensure that the poles of $\Gamma(a_j^{(k)} - \delta_j^{(k)} s_k)$ with $j = 1$ to $M_k$ are separated from those of $\Gamma(1 - a_j + \sum_{i=1}^{r} \delta_j^{(k)} s_k)$ with $j = 1$ to $n$ and $\Gamma(1 - c_j^{(k)} + \gamma_j^{(k)} s_k)$ with $j = 1$ to $N_k$ to the left of the contour $L_k$. The condition for absolute convergence of multiple Mellin-Barnes type contour (1.9) can be obtained by extension of the corresponding conditions for multivariable H-function given by as :

$$|\arg z^{(k)}_m| < \frac{1}{2} A_i^{(k)} \pi, \text{ where}$$

$$A_i^{(k)} = \sum_{j=1}^{N_k} \alpha_j^{(k)} - \tau_i - \sum_{j=N_k+1}^{P^{(k)}} \alpha_j^{(k)} - \tau_i^{(k)} - \sum_{j=1}^{N_k} \beta_j^{(k)} + \sum_{j=N_k+1}^{P^{(k)}} \gamma_j^{(k)} - \tau_i^{(k)} - \sum_{j=1}^{Q^{(k)}} \delta_j^{(k)} + \sum_{j=M_k+1}^{Q^{(k)}} \delta_j^{(k)}$$

$$+ \sum_{j=1}^{M_k} \delta_j^{(k)} > 0, \text{ with } k = 1, \cdots, r, i = 1, \cdots, R, i^{(k)} = 1, \cdots, R^{(k)} \quad (1.5)$$

The complex numbers $z_i$ are not zero. Throughout this document, we assume the existence and absolute convergence conditions of the multivariable Aleph-function.

We may establish the asymptotic expansion in the following convenient form :

$$N(z_1^{(k)}, \cdots, z_r^{(k)}) = 0(|z_1^{(k)}|^{\alpha_1}, \cdots, |z_r^{(k)}|^{\alpha_r}) \rightarrow 0$$

$$N(z_1^{(k)}, \cdots, z_r^{(k)}) = 0(|z_1^{(k)}|^{\beta_1}, \cdots, |z_r^{(k)}|^{\beta_r}) \rightarrow \infty$$

where $k = 1, \cdots, r : \alpha_k = \min[R(e^{(k)}_j / \delta_j^{(k)})], j = 1, \cdots, m_k$ and

$$\beta_k = \max[R((e_j^{(k)} - 1) / \gamma_j^{(k)})], j = 1, \cdots, n_k$$
Serie representation of Aleph-function of $u$-variables is given by

$$N(z''_1, \ldots, z''_v) = \sum_{G_1, \ldots, G_v=0}^{\infty} \sum_{g_1=0}^{M_1} \cdots \sum_{g_v=0}^{M_v} \frac{(-1)^{G_1+\cdots+G_v}}{G_1! \cdots G_v!} \psi_1(\eta_{G_1, g_1}, \ldots, \eta_{G_v, g_v})$$

$$\times \xi_1(\eta_{G_1, g_1}) \cdots \xi_v(\eta_{G_v, g_v}) z_1^{-\eta_{G_1, g_1}} \cdots z_v^{-\eta_{G_v, g_v}}$$ (1.6)

Where $\psi(\cdot, \ldots, \cdot), \theta_i(\cdot), i = 1, \ldots, r$ are given respectively in (1.2), (1.3) and

$$\eta_{G_1, g_1} = \frac{d^{(1)}_{g_1} + G_1}{\delta_{g_1}^{(1)}}, \ldots, \eta_{G_v, g_v} = \frac{d^{(v)}_{g_v} + G_v}{\delta_{g_v}^{(v)}}$$

which is valid under the conditions $\delta_j^{(i)}[d_j^{(i)} + p_i] \neq \delta_j^{(i)}[d_j^{(i)} + G_i]$ for $j \neq m_i, m_i = 1, \ldots, \eta_{G_i, g_i}; p_i, n_i = 0, 1, 2, \ldots; y_i \neq 0, i = 1, \ldots, v$

The I-function is defined and represented in the following manner.

$$I(z'_1, \ldots, z'_s) = \int_{L'_1} \cdots \int_{L'_s} \phi(t_1, \ldots, t_s) \prod_{i=1}^{s} \xi_i(t_i) z'_i^{e_i} \frac{dt_1 \cdots dt_s}{(2\pi i)^s}$$ (1.7)

$$= \frac{1}{(2\pi i)^s} \int_{L'_1} \cdots \int_{L'_s} \phi(t_1, \ldots, t_s) \prod_{i=1}^{s} \xi_i(t_i) z'_i^{e_i} \frac{dt_1 \cdots dt_s}{(2\pi i)^s}$$ (1.8)

where $\phi(t_1, \ldots, t_s), \xi_i(t_i), i = 1, \ldots, s$ are given by:

$$\phi(t_1, \ldots, t_s) = \frac{\prod_{j=1}^{n'} \Gamma_{A'_j} \left(1 - a'_j + \sum_{i=1}^{s} a'_j^{(i)} t_i \right)}{\prod_{j=n'+1}^{n''} \Gamma_{A'_j} \left(a'_j - \sum_{i=1}^{s} a'_j^{(i)} t_i \right) \prod_{j=m'+1}^{m''} \Gamma_{B'_j} \left(1 - b'_j + \sum_{i=1}^{s} b'_j^{(i)} t_i \right)}$$ (1.9)

$$\xi_i(t_i) = \frac{\prod_{j=1}^{n'} \Gamma_{C_j^{(i)}} \left(1 - c_j^{(i)} + \gamma_j^{(i)} t_i \right) \prod_{j=m'+1}^{m''} \Gamma_{D_j^{(i)}} \left(d_j^{(i)} - \delta_j^{(i)} t_i \right)}{\prod_{j=n'+1}^{n''} \Gamma_{C_j^{(i)}} \left(c_j^{(i)} - \gamma_j^{(i)} t_i \right) \prod_{j=m'+1}^{m''} \Gamma_{D_j^{(i)}} \left(1 - d_j^{(i)} + \delta_j^{(i)} t_i \right)}$$ (1.10)

For more details, see Nambisan et al [2].

Following the result of Braaksma [1] the I-function of $r$ variables is analytic if...
The integral (2.1) converges absolutely if
\[
\Delta_k = \sum_{j=n+1}^{n'} A_j \alpha_j \left( k \right) - \sum_{j=1}^{n'} B_j \beta_j \left( k \right) - \sum_{j=1}^{m'_k} D_j \gamma_j \left( k \right) - \sum_{j=m'_k+1}^{n'_k} D_j \gamma_j \left( k \right) + \sum_{j=1}^{n'_k} C_j \gamma_j \left( k \right) - \sum_{j=n'_k+1}^{n'} C_j \gamma_j \left( k \right) > 0 \quad (1.13)
\]

Consider the second multivariable I-function,
\[
\begin{align*}
I \left( z''_1, \ldots, z''_u \right) &= \int_{L''_1}^{L''_u} \prod_{i=1}^{u} \xi_i \left( x_i \right) z''_i \text{d}x_1 \cdots \text{d}x_u \\
&= \frac{1}{\left( 2\pi \omega \right)^u} \int_{L''_1}^{L''_u} \prod_{i=1}^{u} \xi_i \left( x_i \right) z''_i \text{d}x_1 \cdots \text{d}x_u
\end{align*}
\]

For more details, see Nambisan et al [2].

Following the result of Braaksma [1] the I-function of r variables is analytic if:
\[
U_i = \sum_{j=1}^{p'_i} A_j \alpha_j \left( i \right) - \sum_{j=1}^{q'_i} B_j \beta_j \left( i \right) + \sum_{j=1}^{q'_i} C_j \gamma_j \left( i \right) - \sum_{j=1}^{q'_i} D_j \delta_j \left( i \right) \leq 0, \quad i = 1, \ldots, u
\]

The integral (2.1) converges absolutely if
where $|\text{arg}(z^\alpha_k)| < \frac{1}{2} \Delta_k^\alpha \pi, k = 1, \cdots, u$

$$\Delta_k = - \sum_{j=n+1}^{p^*} A_j^\alpha \gamma_j^{(k)} - \sum_{j=1}^{p} B_j^\alpha \delta_j^{(k)} + \sum_{j=1}^{m^*} D_j^\alpha \delta_j^{(k)} - \sum_{j=m^*+1}^{q} E_j^\alpha \gamma_j^{(k)} + \sum_{j=1}^{n} C_j^\alpha \gamma_j^{(k)} - \sum_{j=n^*+1}^{q^*} C_j^\alpha \gamma_j^{(k)} > 0 \quad (1.19)$$

2. Integral representation of Lauricella function of several variables

The Lauricella function $F_D^{(k)}$ is defined as

$$F_D^{(k)}[a, b_1, \ldots, b_k; c; x_1, \ldots, x_k] = \frac{\Gamma(c)}{\Gamma(a) \prod_{j=1}^{k} \Gamma(b_j)} \frac{1}{(2\pi \omega)^k} \int_{L_1} \cdots \int_{L_k} \frac{\Gamma\left(a + \sum_{j=1}^{k} \zeta_j\right) \Gamma(b_1 + \zeta_1, \ldots, \Gamma(b_k + \zeta_k)}{\Gamma\left(c + \sum_{j=1}^{k} \zeta_j\right)}$$

$$\prod_{j=1}^{k} \Gamma(\zeta_j) (-x_j)^{\zeta_j} d\zeta_1 \cdots d\zeta_k \quad (2.1)$$

where $\max\{ |\text{arg}(z_{x_1})|, \ldots, |\text{arg}(z_{x_k})| \} < \pi, c \neq 0, -1, -2, \cdots$.

In order to evaluate a number of integrals of multivariable I-functions, we first establish the formula

$$\int_{a}^{b} (t-a)^{\alpha-1} (b-t)^{\beta-1} \prod_{j=1}^{k} (f_j t + g_j)^{\sigma_j} dt = (b-a)^{\alpha+\beta-1} B(\alpha, \beta) \prod_{j=1}^{k} (a f_j + g_j)^{\sigma_j}$$

$$\times F_D^{(k)} \left[ \alpha, -\sigma_1, \ldots, -\sigma_k; \alpha + \beta; \frac{(b-a) f_1}{a f_1 + g_1}, \ldots, \frac{(b-a) f_k}{a f_k + g_k} \right] \quad (2.2)$$

where $a, b \in \mathbb{R}(a < b), \alpha, \beta, f_i, g_i, \sigma_i \in \mathbb{C}, (i = 1, \ldots, k); \min(\text{Re}(\alpha), \text{Re}(\beta)) > 0$ and

$$\max_{1 \leq j \leq k} \left\{ \frac{(b-a) f_i}{a f_i + g_i} \right\} < 1$$

$F_D^{(k)}$ is a Lauricella’s function of $k$-variables, see Srivastava et al ([6], page 60).

The formula (2.2) can be established by expanding $\prod_{j=1}^{k} (f_j t + g_j)^{\sigma_j}$ by means of the formula:

$$(1-z)^{-\alpha} = \sum_{r=0}^{\infty} \frac{\alpha_r}{r!} z^r(|z| < 1) \quad (2.3)$$

integrating term by term with the help of the integral given by Saigo and Saxena [3, page 93, eq.(3.2)] and applying the definition of the Lauricella function $F_D^{(k)}$ [6, page 60].

3. Eulerian integral

Let

$$X = m'_1, n'_1; \cdots; m'_s, n'_s; m''_1, n''_1; \cdots; m''_u, n''_u; 1, 0; \cdots; 1, 0; 1, 0; \cdots; 1, 0 \quad (3.1)$$

$$Y = p'_1, q'_1; \cdots; p'_s, q'_s; p''_1, q''_1; \cdots; p''_u, q''_u; 0, 1; \cdots; 0, 1; 0, 1; \cdots; 0, 1 \quad (3.2)$$
\[A = (a_j^0, A_j^{(s)}, \cdots, A_j^{(s)}, 0, \cdots, 0, 0, \cdots, 0; A_j^{(p)})_{1,p}^{(s)} \quad (3.3)\]

\[B = (b_j^0, B_j^{(s)}, \cdots, B_j^{(s)}, 0, \cdots, 0, 0, \cdots, 0; B_j^{(p)})_{1,q}^{(s)} \quad (3.4)\]

\[A' = (a_j''; 0, \cdots, 0, A_j^{(s)}, \cdots, A_j^{(s)}, 0, \cdots, 0, 0, \cdots, 0; A_j''_{1,p''}^{(s)} \quad (3.5)\]

\[B' = (b_j''; 0, \cdots, 0, B_j^{(s)}, \cdots, B_j^{(s)}, 0, \cdots, 0, 0, \cdots, 0; B_j''_{1,q''}^{(s)} \quad (3.6)\]

\[C = (c_j^{(s)}, \gamma_j^{(s)}; C_j^{(s)}, \cdots, (c_j^{(s)}, \gamma_j^{(s)}, C_j^{(s)}), (c_j^{(s)}, \gamma_j^{(s)}, C_j^{(s)}), (c_j^{(s)}, \gamma_j^{(s)}; C_j^{(s)}), (c_j^{(s)}, \gamma_j^{(s)}; C_j^{(s)}), \cdots, (c_j^{(s)}, \gamma_j^{(s)}; C_j^{(s)}), (c_j^{(s)}, \gamma_j^{(s)}; C_j^{(s)}), \cdots) \quad (3.7)\]

\[D = (d_j^{(s)}, \delta_j^{(s)}; D_j^{(s)}, \cdots, (d_j^{(s)}, \delta_j^{(s)}, D_j^{(s)}), (d_j^{(s)}, \delta_j^{(s)}, D_j^{(s)}), (d_j^{(s)}, \delta_j^{(s)}; D_j^{(s)}), (d_j^{(s)}, \delta_j^{(s)}; D_j^{(s)}), \cdots, (d_j^{(s)}, \delta_j^{(s)}; D_j^{(s)}), (d_j^{(s)}, \delta_j^{(s)}; D_j^{(s)}), \cdots) \quad (3.8)\]

\[K_1 = (1 - \alpha - \sum_{i=1}^{v} \eta_{G_i, g_i} (\mu_i + \mu_i') \mu_1, \cdots, \mu_s, \mu_1', \cdots, \mu', 1, \cdots, 1; v_1, \cdots, v_l; 1 \quad (3.9)\]

\[K_2 = (1 - \beta - \sum_{i=1}^{v} \eta_{G_i, g_i} (\rho_i + \rho_i') \rho_1, \cdots, \rho_s, \rho_1', \cdots, \rho', 0, \cdots, 0; \tau_1, \cdots, \tau_l; 1 \quad (3.10)\]

\[K_P = [1 - A_j; 0, \cdots, 0, 0, \cdots, 0, 0, \cdots, 0, 0, 1, \cdots, 1; 1]_{1,P} \quad (3.11)\]

\[K_j = [1 + \sigma_j - \sum_{i=1}^{v} \eta_{G_i, g_i} (\lambda_i^{(s)} + \lambda_i^{(s)}; \lambda_j^{(s)}, \lambda_j^{(s)}; \lambda_j^{(s)}, \lambda_j^{(s)}, \lambda_j^{(s)}, \lambda_j^{(s)}, 0, \cdots, 1, \cdots, 0, \cdots, 1, \cdots, 1, \cdots, 1, \cdots, 1, \cdots, 1); \lambda_j^{(s)}; 1]_{1,k} \quad (3.12)\]

\[L_1 = (1 - \alpha - \beta - \sum_{i=1}^{v} \eta_{G_i, g_i} (\mu_i + \mu_i' + \rho_i + \rho_i') \mu_1, \cdots, \mu_s, \mu_1', \cdots, \mu', 1, \cdots, 1, v_1 + \tau_1, \cdots, v_l + \tau_l; 1) \quad (3.13)\]

\[L_Q = [1 - B_j; 0, \cdots, 0, 0, \cdots, 0, 0, \cdots, 0, 0, 1, \cdots, 1; 1]_{1,Q} \quad (3.14)\]

\[L_j = [1 + \sigma_j - \sum_{i=1}^{v} \eta_{G_i, g_i} (\lambda_i^{(s)} + \lambda_i^{(s)}; \lambda_j^{(s)}, \lambda_j^{(s)}; \lambda_j^{(s)}, \lambda_j^{(s)}, \lambda_j^{(s)}, \lambda_j^{(s)}, 0, \cdots, 0, \cdots, 0, \cdots, 1, \cdots, 1, \cdots, 1, \cdots, 1); \lambda_j^{(s)}; 1]_{1,k} \quad (3.15)\]

\[A_1 = A, A'; B_1 = B, B' \quad (3.16)\]
where $G_v = \psi(\xi_{G_1, g_1}, \cdots, \xi_{G_v, g_v}) \times \xi_1(\eta_{G_1, g_1}) \cdots \xi_v(\eta_{G_v, g_v})$

$\psi_1, \xi_i, i = 1, \cdots, v$ are defined respectively by (1.2) and (1.3)

\[
\int_a^b \frac{1}{(t-a)^{\alpha-1}(b-t)^{\beta-1}} \prod_{j=1}^k (f_j t + g_j)^{\gamma_j} \left( \begin{array}{c}
z_1(t-a)^{\alpha_1}(b-t)^{\beta_1} \prod_{j=1}^k (f_j t + g_j)^{-\lambda_j^{(1)}} \\
\vdots \\
z_v(t-a)^{\alpha_v}(b-t)^{\beta_v} \prod_{j=1}^k (f_j t + g_j)^{-\lambda_j^{(v)}}
\end{array} \right) \]

\[
pFQ \left[ (A_P); (B_Q); -\sum_{i=1}^l \frac{z_i''(t-a)^{\alpha_i}(b-t)^{\beta_i} \prod_{j=1}^k (f_j t + g_j)^{-\zeta_i^{(i)}}}{(t-a)^{\alpha_1+\beta_1}} \right] dt = (b-a)^{\alpha+\beta-1}
\]

\[
P_1 = (b-a)^{\alpha+\beta-1} \left\{ \prod_{j=1}^h (af_j + g_j)^{\gamma_j} \right\}
\]

\[
B_{u,v} = (b-a)^{\sum_{i=1}^v (\mu_i + \mu_i' + \rho_i + \rho_i')} \eta_{G_i, k_i} \left\{ \prod_{j=1}^h (af_j + g_j) - \sum_{i=1}^v (\lambda_i + \lambda_i') \eta_{G_i, k_i} \right\} G_v
\]
We obtain the I-function of $s + u + k + l$ variables.

Provided that

(A) $a, b \in \mathbb{R}(a < b), \mu_i, \rho_i, \rho'_j, \lambda^{(i)}_v, \lambda^{(i)}_u \in \mathbb{R}^+; f_i, g_j, r_v, \sigma_j \in \mathbb{C} \ (i = 1, \ldots, s; j = 1, \ldots; u; v = 1, \ldots, k)$

(B) $m, n, p, q \in \mathbb{N}^*; d^{(i)}_j \in \mathbb{R}(j = 1, \ldots, q_i; i = 1, \ldots, s)$

The exponents

\begin{align*}
A'_j(j = 1, \ldots, p'; B'_j(j = 1, \ldots, q'), C'^{(i)}_j(j = 1, \ldots, p'_i; i = 1, \ldots, s), D'^{(i)}_j(j = 1, \ldots, q'_i; i = 1, \ldots, s)
\end{align*}

of various gamma function involved in (1.10) and (1.11) may take non integer values.
The exponents of various gamma function involved in (1.15) and (1.16) may take non integer values.

(C) $\max_{1 \leq j \leq k} \left\{ \frac{(b - a) f_i}{a f_1 + g_i} \right\} < 1$

(D) $\Re \left[ \alpha + \sum_{i=1}^{s} \mu_i \min_{1 \leq j \leq m_i} \frac{d_j^{(i)}}{\delta_j^{(i)}} + \sum_{i=1}^{u} \mu'_i \min_{1 \leq j \leq m'_i} \frac{d'_j^{(i)}}{\delta'_j^{(i)}} \right] > 0$

$\Re \left[ \beta + \sum_{i=1}^{s} \rho_i \min_{1 \leq j \leq m_i} \frac{d_j^{(i)}}{\delta_j^{(i)}} + \sum_{i=1}^{u} \rho'_i \min_{1 \leq j \leq m'_i} \frac{d'_j^{(i)}}{\delta'_j^{(i)}} \right] > 0$

(E) $U_i = \sum_{j=1}^{p'} A_j^{(i)} - \sum_{j=1}^{q'} B_j^{(i)} - \sum_{j=1}^{p'_i} C_j^{(i)} - \sum_{j=1}^{q'_i} D_j^{(i)} \leq 0, i = 1, \ldots, s$

$U'_i = \sum_{j=1}^{p''} A_j^{(i)} - \sum_{j=1}^{q''} B_j^{(i)} - \sum_{j=1}^{p''_i} C_j^{(i)} - \sum_{j=1}^{q''_i} D_j^{(i)} \leq 0, i = 1, \ldots, u$

(F) $\Delta_k = - \sum_{j=m'+1}^{k} A_j^{(k)} - \sum_{j=1}^{q'} B_j^{(k)} - \sum_{j=1}^{m'} D_j^{(k)} - \sum_{j=m'+1}^{q'} D_j^{(k)} - \sum_{j=1}^{p''} C_j^{(k)} - \sum_{j=m'+1}^{q''} C_j^{(k)} - \sum_{j=1}^{p''} C_j^{(k)} - \sum_{j=m'+1}^{q''} C_j^{(k)}$

$\Delta'_k = - \sum_{j=m''+1}^{k} A_j^{(k)} - \sum_{j=1}^{q''} B_j^{(k)} - \sum_{j=1}^{m''} D_j^{(k)} - \sum_{j=m''+1}^{q''} D_j^{(k)} - \sum_{j=1}^{p''} C_j^{(k)} - \sum_{j=m''+1}^{q''} C_j^{(k)} - \sum_{j=1}^{p''} C_j^{(k)} - \sum_{j=m''+1}^{q''} C_j^{(k)}$

(G) $\arg \left( z_i \prod_{j=1}^{k} (f_j + g_j)^{-\lambda_j^{(i)}} \right) < \frac{1}{2} \Delta_i \pi \quad (a \leq t \leq b; i = 1, \ldots, s)$

$\arg \left( z_i \prod_{j=1}^{k} (f_j + g_j)^{-\lambda_j^{(i)}} \right) < \frac{1}{2} \Delta_i' \pi \quad (a \leq t \leq b; i = 1, \ldots, u)$

(H) $P \leq Q + 1$. The equality holds, when , in addition,
either $P > Q$ and  
\[ z_i'' \left( \prod_{j=1}^{k} (f_j t + g_j)^{-c_j(i)} \right) \left( a t \right)^{m_i} < 1 \quad (a \leq t \leq b) \]

or $P \leq Q$ and  
\[ \max_{1 \leq i \leq k} \left[ \left( \prod_{j=1}^{k} (f_j t + g_j)^{-c_j(i)} \right) \right] < 1 \quad (a \leq t \leq b) \]

(1) The multiple series occurring on the right-hand side of (3.19) is absolutely and uniformly convergent.

Proof

First expressing the the multivariable Aleph-function in serie with the help of (1.6) and we interchange the order of summations and t-integral (which is permissible under the conditions stated). Expressing the I-function of s-variables and u-variables defined by Nambisan et al [2] by the Mellin-Barnes contour integral with the help of the equation (1.9) and (1.15) respectively, the generalized hypergeometric function $\mathbf{pFQ}(\cdot)$ in Mellin-Barnes contour integral with the help of (2.1) and interchange the order of integrations which is justifiable due to absolute convergence of the integral involved in the process. Now collect the power of $(f_j t + g_j)$ with $j = 1, \cdots, k$ and use the equations (2.1) and (2.2) and we obtain $k$–Mellin-Barnes contour integral. Interpreting $(r + s + k + l)$–Mellin-barnes contour integral in multivariable I-function defined by Nambisan et al [2], we obtain the desired result.

4. Particular case

$A_j' = B_j' = C_j^{(i)} = D_j^{(i)} = A_j'' = B_j'' = C_j''^{(i)} = D_j''^{(i)} = 1$, The multivariable I-functions defined by Nambisan reduces to multivariable H-function defined by Srivastava et al [7]. We have.

\[
\begin{align*}
\int_a^b (t-a)^{\alpha-1} (b-t)^{\beta-1} \prod_{j=1}^{k} (f_j t + g_j)^{\gamma_j} & \left( z_1''(t-a)^{\rho_1} (b-t)^{\rho_1'} \prod_{j=1}^{k} (f_j t + g_j)^{-\lambda_j^{(1)}} \right) \\
& \cdots \\
& \left( z_v''(t-a)^{\rho_v} (b-t)^{\rho_v'} \prod_{j=1}^{k} (f_j t + g_j)^{-\lambda_j^{(v)}} \right)
\end{align*}
\]

\[
H \left( \begin{array}{c}
z_1(t-a)^{\alpha_1} (b-t)^{\rho_1} \prod_{j=1}^{k} (f_j t + g_j)^{-\lambda_j^{(1)}} \\
\vdots \\
z_v(t-a)^{\alpha_v} (b-t)^{\rho_v} \prod_{j=1}^{k} (f_j t + g_j)^{-\lambda_j^{(v)}}
\end{array} \right)
\]

\[
\mathbf{pFQ} \left[ (A_1 \cdots A_l); (B_1 \cdots B_l); - \sum_{i=1}^{l} z_i''(t-a)^{\alpha_i} (b-t)^{\rho_i} \prod_{j=1}^{k} (f_j t + g_j)^{-\lambda_j^{(i)}} \right] dt = (b-a)^{\alpha+\beta-1}
\]

\[
= P_1 \prod_{j=1}^{Q} \frac{\Gamma(B_j)}{\Gamma(A_j)} \sum_{h_1=1}^{M_1} \cdots \sum_{h_l=1}^{M_l} \cdots \sum_{k_1=0}^{\infty} \cdots \sum_{k_u=0}^{\infty} \frac{h_1 R_1 + \cdots + h_u R_u}{L} \prod_{i=1}^{u} z_i^{m_i} \prod_{k=1}^{u} z_k^{n_k} B_{R_i} B_{u,v}
\]
under the same conditions and notations that (3.19) with $A_j = B_j = C_j = D_j = 1$

**Remark**

By the following similar procedure, the results of this document can be extended to product of any finite number of multivariable I-functions defined by Nambisan et al [2].

5. Conclusion

In this paper we have evaluated a generalized Eulerian integral involving the product of two multivariable I-functions, defined by Nambisan et al [2], a expansion of multivariable Aleph-function and a generalized hypergeometric function with general arguments. The formulae established in this paper is very general nature. Thus, the results established in this research work would serve as a key formula from which, upon specializing the parameters, as many as desired results involving the special functions of one and several variables can be obtained.
