Integral involving a generalized multiple-index Mittag-Leffler function, hyperbolic functions, a class of polynomials, multivariable Aleph-function and multivariable I-function

F.Y. AY ANT

1 Teacher in High School, France

E-mail: fredericayant@gmail.com

1. Introduction and preliminaries.

The function Aleph of several variables generalize the multivariable I-function recently study by C.K. Sharma and Ahmad [5], itself is a generalisation of G and H-functions of multiple variables. The multiple Mellin-Barnes integral occurring in this paper will be referred to as the multivariables Aleph-function throughout our present study and will be defined and represented as follows.

\[ \psi(s_1, \ldots, s_r) = \prod_{k=1}^{r} \theta_k(s_k) y_k^{s_k} \, ds_1 \cdots ds_r \] (1.1)

with \( \omega = \sqrt{-1} \)

\[ \psi(s_1, \ldots, s_r) = \frac{\prod_{j=1}^{r} \Gamma(1 + c_j) \prod_{k=1}^{r} \Gamma(1 - \alpha_j) \prod_{k=1}^{r} \Gamma(1 - \beta_j) \prod_{k=1}^{r} \Gamma(1 - b_j)}{\prod_{j=1}^{r} \Gamma(1 + c_j) \prod_{k=1}^{r} \Gamma(1 - \alpha_j) \prod_{k=1}^{r} \Gamma(1 - \beta_j) \prod_{k=1}^{r} \Gamma(1 - b_j)} \] (1.2)

and \( \theta_k(s_k) \)

\[ \theta_k(s_k) = \frac{\prod_{j=1}^{r} \Gamma(1 + c_j) \prod_{k=1}^{r} \Gamma(1 - \alpha_j) \prod_{k=1}^{r} \Gamma(1 - \beta_j) \prod_{k=1}^{r} \Gamma(1 - b_j)}{\prod_{j=1}^{r} \Gamma(1 + c_j) \prod_{k=1}^{r} \Gamma(1 - \alpha_j) \prod_{k=1}^{r} \Gamma(1 - \beta_j) \prod_{k=1}^{r} \Gamma(1 - b_j)} \] (1.3)
Suppose, as usual, that the parameters
\[ b_j, j = 1, \ldots, Q; a_j, j = 1, \ldots, P; \]
\[ c_j^{(k)}, j = n_k + 1, \ldots, P^{(k)}; d_j^{(k)}, j = 1, \ldots, N_k; \]
\[ d_j^{(k)}, j = M_k + 1, \ldots, Q^{(k)}; d_j^{(k)}, j = 1, \ldots, M_k; \]
with \( k = 1, \ldots, r, i = 1, \ldots, R_i^{(k)} = 1, \ldots, R^{(k)} \)
are complex numbers, and the \( \alpha' s, \beta' s, \gamma' s \) and \( \delta' s \) are assumed to be positive real numbers for standardization purpose such that
\[
U_i^{(k)} = \sum_{j=1}^{N} \alpha_j^{(k)} + \tau_i \sum_{j=N+1}^{P} \alpha_j^{(k)} + \sum_{j=1}^{N_k} \sum_{j=n_k+1}^{P^{(k)}} \gamma_j^{(k)} + \tau_i \sum_{j=n_k+1}^{P^{(k)}} \gamma_j^{(k)} - \tau_i \sum_{j=1}^{Q} \beta_j^{(k)} - \sum_{j=1}^{M_k} \delta_j^{(k)}
\]
\[-\tau_i^{(k)} \sum_{j=M_k+1}^{Q^{(k)}} \delta_j^{(k)} \leq 0 \quad (1.4)\]

The real numbers \( \tau_i \) are positives for \( i = 1 \) to \( R \), \( \tau_i^{(k)} \) are positives for \( i^{(k)} = 1 \) to \( R^{(k)} \)

The contour \( L_k \) is in the \( s_k \)-plane and run from \( \sigma - i \infty \) to \( \sigma + i \infty \) where \( \sigma \) is a real number with loop, if necessary, ensure that the poles of \( \Gamma(a_j^{(k)} - \delta_j^{(k)} s_k) \) with \( j = 1 \) to \( m_k \) are separated from those of \( \Gamma(1-a_j^{(k)} + \gamma_j^{(k)} s_k) \) with \( j = 1 \) to \( N_k \) to the left of the contour \( L_k \).

The condition for absolute convergence of multiple Mellin-Barnes type contour (1.9) can be obtained by extension of the corresponding conditions for multivariable H-function given by as:

\[
| \arg z_k | < \frac{1}{2} A_i^{(k)} \pi, \quad \text{where}
\]
\[
A_i^{(k)} = \sum_{j=1}^{N} \alpha_j^{(k)} - \tau_i \sum_{j=N+1}^{P} \alpha_j^{(k)} - \tau_i \sum_{j=1}^{Q} \beta_j^{(k)} - \tau_i \sum_{j=n_k+1}^{P^{(k)}} \gamma_j^{(k)} + \sum_{j=1}^{M_k} \delta_j^{(k)}
\]
\[+ \sum_{j=M_k+1}^{Q^{(k)}} \delta_j^{(k)} \leq 0, \quad \text{with} \quad k = 1, \ldots, r, i = 1, \ldots, R, i^{(k)} = 1, \ldots, R^{(k)} \quad (1.5)\]

The complex numbers \( z_k \) are not zero. Throughout this document, we assume the existence and absolute convergence conditions of the multivariable Aleph-function.

We may establish the asymptotic expansion in the following convenient form:
\[
N(z_1, \ldots, z_r) = 0(|z_1|^{\alpha_1}, \ldots, |z_r|^{\alpha_r}), \max(|z_1|, \ldots, |z_r|) \rightarrow 0
\]
\[
N(z_1, \ldots, z_r) = 0(|z_1|^{\beta_1}, \ldots, |z_r|^{\beta_r}), \min(|z_1|, \ldots, |z_r|) \rightarrow \infty
\]
where, with \( k = 1, \ldots, r : \alpha_k = \min[\text{Re}(a_j^{(k)} / \delta_j^{(k)})], j = 1, \ldots, M_k \) and
\[ \beta_k = \max \{ \text{Re}((\epsilon_j^{(k)} - 1)/\gamma_j^{(k)}) \}, j = 1, \ldots, N_k \]

Serie representation of Aleph-function of several variables is given by

\[ N(y_1, \ldots, y_r) = \sum_{G_1, \ldots, G_r=0}^{\infty} \sum_{g_1=0}^{M_1} \cdots \sum_{g_r=0}^{M_r} (-)^{G_1+\cdots+G_r} \psi(\eta_{G_1,g_1}, \ldots, \eta_{G_r,g_r}) \]

\[ \times \theta_1(\eta_{G_1,g_1}) \cdots \theta_r(\eta_{G_r,g_r}) y_1^{-\eta_{G_1,g_1}} \cdots y_r^{-\eta_{G_r,g_r}} \] (1.6)

Where \( \psi(\cdot, \ldots, \cdot) \), \( \theta_i(\cdot), i = 1, \ldots, r \) are given respectively in (1.2), (1.3) and

\[ \eta_{G_i,g_i} = \frac{d^{(i)}_g + G_i}{\delta^{(i)}_g}, \quad \eta_{G_r,g_r} = \frac{d^{(r)}_g + G_r}{\delta^{(r)}_g} \]

which is valid under the conditions \( \delta^{(i)}_g [d^{(i)}_j + p_i] \neq \delta^{(j)}_g [d^{(j)}_g + G_i] \) (1.7)

for \( j \neq M_i, M_i = 1, \ldots \eta_{G_i,g_i}; P_i, N_i = 0, 1, 2, \ldots; y_i \neq 0, i = 1, \ldots, r \) (1.8)

In the document, we will note:

\[ G(\eta_{G_1,g_1}, \ldots, \eta_{G_r,g_r}) = \phi(\eta_{G_1,g_1}, \ldots, \eta_{G_r,g_r}) \theta_1(\eta_{G_1,g_1}) \cdots \theta_r(\eta_{G_r,g_r}) \] (1.9)

where \( \phi(\eta_{G_1,g_1}, \ldots, \eta_{G_r,g_r}), \theta_1(\eta_{G_1,g_1}), \ldots, \theta_r(\eta_{G_r,g_r}) \) are given respectively in (1.2) and (1.3)

We will note the Aleph-function of \( r \) variables \( N_{u,w}^{0,N:0} \left( \begin{array}{c} z_1 \\ \vdots \\ z_r \end{array} \right) \) (1.10)

The multivariable I-function is defined in term of multiple Mellin-Barnes type integral:

\[ I(z_1, z_2, \ldots, z_s) = \int_{L_1} \cdots \int_{L_s} \xi(t_1, \ldots, t_s) \prod_{i=1}^{s} \phi_i(t_i) z_i^{t_i} dt_1 \cdots dt_s \] (1.12)

The defined integral of the above function, the existence and convergence conditions, see Y,N Prasad [3]. Throughout
The present document, we assume that the existence and convergence conditions of the multivariable I-function.

The condition for absolute convergence of multiple Mellin-Barnes type contour (1.9) can be obtained by extension of the corresponding conditions for multivariable H-function given by as:

\[ |\arg z_k| < \frac{1}{2} \Omega_i^{(k)} \pi, \text{ where} \]

\[ \Omega_i^{(k)} = \sum_{k=1}^{n_i} \alpha_k^{(i)} - \sum_{k=n_i+1}^{p_i} \alpha_k^{(i)} + \sum_{k=1}^{m_i} \beta_k^{(i)} - \sum_{k=m_i+1}^{q_i} \beta_k^{(i)} + \left( \sum_{k=1}^{n_2} \alpha_k^{(i)} - \sum_{k=n_2+1}^{p_2} \alpha_k^{(i)} \right) + \cdots + \]

\[ \left( \sum_{k=1}^{n_s} \alpha_k^{(i)} - \sum_{k=n_s+1}^{p_s} \alpha_k^{(i)} \right) - \left( \sum_{k=1}^{q_2} \beta_k^{(i)} + \sum_{k=1}^{q_3} \beta_k^{(i)} + \cdots + \sum_{k=1}^{q_s} \beta_k^{(i)} \right) \]

where \( i = 1, \cdots, s \)

The complex numbers \( z_i \) are not zero. Throughout this document, we assume the existence and absolute convergence conditions of the multivariable I-function.

We may establish the the asymptotic expansion in the following convenient form:

\[ I(z_1, \cdots, z_s) = 0( |z_1|^\alpha_1', \cdots, |z_s|^\alpha_s' ) \cdot \max( |z_1|, \cdots, |z_s| ) \to 0 \]

\[ I(z_1, \cdots, z_s) = 0( |z_1|^\beta_1', \cdots, |z_s|^\beta_s' ) \cdot \min( |z_1|, \cdots, |z_s| ) \to \infty \]

where \( k = 1, \cdots, z : \alpha_k' = \min[ |\text{Re}(b_j^{(k)}/\beta_j^{(k)})|, j = 1, \cdots, n_k \]

\[ \beta_k' = \max[ |\text{Re}(a_j^{(k)}/\alpha_j^{(k)})|, j = 1, \cdots, n_k \]

We will use these following notations in this paper:

\[ U = p_2, p_3, q_3, \cdots; p_{s-1}, q_{s-1}; V = 0, n_2, 0, n_3; \cdots; 0, n_{s-1} \]

\[ W = (p', q'); \cdots; (p^{(s)}, q^{(s)}); X = (m', n'); \cdots; (m^{(s)}, n^{(s)}) \]

\[ A = (a_2, \alpha_2', \alpha_2''); \cdots; (a_{s-1}, \alpha_1', \alpha_1''; \cdots; \alpha_{s-1}'', \alpha_{s-1}''); \]

\[ B = (b_2, \beta_2', \beta_2''); \cdots; (b_{s-1}, \beta_1', \beta_1''; \cdots; \beta_{s-1}'', \beta_{s-1}'') \]

\[ \mathfrak{a} = (a_{sk}; \alpha_1', \alpha_2', \cdots, \alpha_{sk}'); \mathfrak{B} = (b_{sk}; \beta_1', \beta_2', \cdots, \beta_{sk}') \]

\[ A' = (a_{k1}', \alpha_1'; \cdots; (a_{k1}'', \alpha_1'')_1, (p'^{(s)}'; \cdots; (b_{k1}'', \beta_1'^{(s)}); B' = (b_{k1}', \beta_1'^{(s)}; \cdots; (b_{k1}'', \beta_1'^{(s)})_1, (q'^{(s)}') \]

The multivariable I-function write:
The generalized polynomials defined by Srivastava [6], is given in the following manner:

\[ I(z_1, \cdots, z_n) = I_{U; p, q, W}^{V; 0, n_i; X} \left( \begin{array}{c|c} z_1 & A; \mathfrak{A}; A' \\ \vdots & \vdots \\ z_n & B; \mathfrak{B}; B' \end{array} \right) \]  

(1.20)

Where \( n_i \) are arbitrary positive integers and the coefficients \( A, B \) are arbitrary constants, real or complex.

In the present paper, we use the following notation:

\[ S_{N_1', \cdots, N_t' \mid M_1', \cdots, M_t'}^{(N_t' / M_t') \mid \cdots \mid (N_1' / M_1')} = \sum_{K_1 = 0}^{[N_1' / M_1']} \cdots \sum_{K_t = 0}^{[N_t' / M_t']} \frac{(-N_1') M_1' K_1}{K_1!} \cdots \frac{(-N_t') M_t' K_t}{K_t!} \]

\[ A[N_1', K_1; \cdots; N_t', K_t] y_1^{K_1} \cdots y_t^{K_t} \]  

(1.21)

Where \( M_1', \cdots, M_t' \) are arbitrary positive integers and the coefficients \( A[N_1', K_1; \cdots; N_t', K_t] \) are arbitrary constants, real or complex. In the present paper, we use the following notation:

\[ \alpha_1 = \frac{(-N_1') M_1' K_1}{K_1!} \cdots \frac{(-N_t') M_t' K_t}{K_t!} A[N_1', K_1; \cdots; N_t', K_t] \]  

(1.22)

2. Generalized multiple-index Mittag-Leffler function

A further generalization of the Mittag-Leffler functions is proposed recently in Paneva-Konovska [2]. These are 3m-parametric Mittag-Leffler type functions generalizing the Prabhakar [3] 3-parametric function, defined as:

\[ E_{(\gamma_i), (\alpha_i), (\beta_i)}^{(m)}(z) = \sum_{k=0}^{\infty} \frac{(\gamma_1)_{k} \cdots (\gamma_m)_{k}}{\Gamma(\alpha_1 k + \beta_1) \cdots \Gamma(\alpha_m k + \beta_m) k!} z^k \]  

(2.1)

where \( \alpha_i, \beta_i, \gamma_i \in \mathbb{C}, i = 1, \cdots, m, Re(\alpha_i) > 0 \)

Required formula

See Gradshteyn and Ryzhik ([1], 3.518, eq.4 page 576 and eq.5 page 577), we have respectively

Lemme 1

\[ \int_0^{\infty} \frac{\sinh^{\mu-1} x (\cosh x + 1)^{\nu-1}}{b + \cosh x} dx = 2^{\mu-\nu-2} e B\left( 1 + \frac{\mu}{2}, \rho + 2 - \mu + \nu, \rho \right) \times \约合^{\nu} \left( \begin{array}{c} \rho + 2 - \mu - \nu, \rho \\ \rho - \frac{\mu + \nu}{2} + 2 \end{array} \right) \]  

(3.1)

where \( Re(\mu) > 0, Re(\rho - \mu - \nu) > -2, |arg(1 + b)| < \pi \)

Lemme 2
where $b \notin (-\infty, 1)$, $\text{Re}(2 + \rho) > \text{Re}(\mu + \nu)$, $\text{Re}(2\nu + \mu) > 2$

3. General integral

Let $b_k = \frac{(\gamma_1)_k \cdots (\gamma_m)_k}{\Gamma(\alpha_1 + k + \beta_1) \cdots \Gamma(\alpha_m + k + \beta_m)}$ and $X_{c,d,e} = \frac{\sinh^e x(cosh x + 1)^d}{(b + \cosh x)^e}$, we have the following integrals,

Theorem 1

\[
\int_0^\infty \frac{\sinh^{\mu-1} x(cosh x + 1)^{\nu-1}}{(b + \cosh x)^\rho} \, dx = 2^{\mu + \nu - \rho - 2} B \left( \frac{\mu}{2} + \nu - 1, \rho + 2 - \mu - \nu \right)
\]

\[
\times \genhyper{}{2}{1} \left( \frac{\rho + 2 - \mu - \nu, \rho}{\rho - \frac{\mu}{2} + 1} ; \frac{1 - b}{2} \right)
\]

(3.2)

(\text{Theorem 1})

\[
\int_0^\infty \frac{\sinh^{\mu-1} x(cosh x + 1)^{\nu-1}}{(b + \cosh x)^\rho} E_{(\alpha_1), \cdots (\alpha_m), \cdots (\beta_1), \cdots (\beta_m)} \left( 2x^\alpha \right) \frac{S_{N_1, \cdots, N_t}^{M_1, \cdots, M_r}}{\beta_i} \left( \begin{array}{c} y_1 X_{\delta_i, \mu_i, \rho_i} \cdots y_t X_{\delta_i, \mu_i, \rho_i} \\ z_1 X_{\alpha_1, \beta_1, \gamma_1} \cdots z_r X_{\alpha_r, \beta_r, \gamma_r} \end{array} \right)
\]

(4.1)
where \( A_1 = (-1 - n + \mu + v - \rho + (\alpha + \beta - \gamma)k + \sum_{i=1}^r (\delta_i + \mu_i - \rho_i)K_i + \sum_{i=1}^s (\alpha_i + \beta_i - \gamma_i)\eta_{G_i,G_i}; \)

\[ \xi_1 - \eta_1 - \epsilon_1, \ldots, \xi_s - \eta_s - \epsilon_s \]

and \( B_1 = (1 - n + \mu - \rho + (\alpha \over 2 - \gamma)k + \sum_{i=1}^r (\delta_i - \rho_i)K_i + \sum_{i=1}^s (\alpha_i \over 2 - \gamma_i)\eta_{G_i,G_i}; \xi_1 - \eta_1, \ldots, \xi_s - \eta_s) \)

\[ A_2 = (1 + \mu \over 2 - \rho + (\alpha \over 2 - \gamma)k + \sum_{i=1}^r (\delta_i - \rho_i)K_i + \sum_{i=1}^s (\alpha_i \over 2 - \gamma_i)\eta_{G_i,G_i}; \xi_1 - \eta_1, \ldots, \xi_s - \eta_s) \]

Provided

a) \( \min\{\alpha, \beta, \gamma, \delta_1, \mu_1, \rho_1, \alpha_1, \beta_1, \gamma_1, \eta_1, \epsilon_1, \xi_1\} > 0, i = 1, \ldots, t, j = 1, \ldots, r, k = 1, \ldots, s \)

b) \( \Re(\mu + k\alpha) + \sum_{i=1}^r \alpha_i \min_{1 \leq j \leq M_i} \Re \left( \frac{d_j^{(i)}}{d_j^{(i)}} \right) + \sum_{i=1}^r \eta_i \min_{1 \leq j \leq M_i} \Re \left( \frac{b_j^{(i)}}{\beta_j^{(i)}} \right) > 0 \)

c) \( \Re(\rho - \mu - v + k(\gamma - \alpha - \beta) + \sum_{i=1}^r (\gamma_i - \alpha_i - \beta_i) \min_{1 \leq j \leq M_i} \Re \left( \frac{d_j^{(i)}}{d_j^{(i)}} \right) + \sum_{i=1}^r (\xi_i - \eta_i - \epsilon_i) \min_{1 \leq j \leq M_i} \Re \left( \frac{b_j^{(i)}}{\beta_j^{(i)}} \right) > -2 \)

d) \( |\arg z_k| < \frac{1}{2} A_i^{(k)} \pi, \) where \( A_i^{(k)} \) is defined by (1.5); \( i = 1, \ldots, r \)

e) \( |\arg Z_k| < \frac{1}{2} \Omega_i^{(k)} \pi, \) where \( \Omega_i^{(k)} \) is defined by (1.11); \( i = 1, \ldots, s \)
f) \( |\arg(1 + b)| < \pi \) and \( \tilde{\alpha}_i, \tilde{\beta}_i, \gamma_i \in \mathbb{C}, i = 1, \ldots, m, \Re(\alpha_i) > 0 \)

g) The series occuring on the right-hand side of (4.1) is absolutely and uniformly convergent.

**Theorem 2**

\[
\int_{0}^{\infty} \frac{\sinh^{\mu - 1} x(\cosh x - 1)^{\nu - 1}}{(b + \cosh x)^{\rho}} E_{(\gamma_i), (\beta_i)}(z x^{\alpha}) \left( Y_{N_1}, \ldots, Y_{N_r} \right) \left( 1 \right) \left( y_1 X_{\delta_1, \mu_1, \rho_1} \ldots y_t X_{\delta_t, \mu_t, \rho_t} \right) \left( 1 \right) 
\]

\[
\int_{U_{P_1, Q_1}; W} \left( Z_{X_{\eta_1, \xi_1, \xi_1}} \ldots Z_{X_{\eta_s, \epsilon_s, \xi_r}} \right) \left( 1 \right) 
\]

\[

\]

\[
\left( - \right)^{G_1 + \cdots + G_r} G_{(\alpha_1, 1, \ldots, \eta_{G_r, G_r})} a_{1} b_{k}^{k!} z_{1}^{\gamma_{1, G_1, G_1}} \cdots z_{r}^{\eta_{G_r, G_r}} y_{1}^{K_1} \cdots y_{t}^{K_t} (1 - b)^{n - \eta_i} 
\]

\[
\eta^{\mu + \alpha + \sum_{i=1}^{t} K_i \delta_i + \sum_{i=1}^{r} \alpha_i \eta_{G_i, G_i} + v + \beta k + \sum_{i=1}^{s} K_i \mu_i + \sum_{i=1}^{r} \beta_i \eta_{G_i, G_i} - \rho - \gamma k + \sum_{i=1}^{s} \rho_i K_i - \sum_{i=1}^{r} \gamma_i \eta_{G_i, G_i} 
\]

ISSN: 2231-5373  http://www.ijmttjournal.org  Page 132
Provided that:

(a) \( \min \{ \alpha, \beta, \gamma, \delta_1, \mu_i, \rho_i, \alpha_j, \beta_j, \gamma_j, \eta_k, \epsilon_i, \xi_i \} > 0, i = 1, \ldots, t, j = 1, \ldots, r, k = 1, \ldots, s \)

(b) \( \Re (2 + \rho + k \gamma) + \sum_{i=1}^{r} \gamma_i \min_{1 \leq j \leq M_i} \Re \left( \frac{d^{(i)}}{d^{(i)}} \right) + \sum_{i=1}^{t} \xi_i \min_{1 \leq j \leq m^{(i)}} \Re \left( \frac{b^{(i)}}{\beta^{(i)}} \right) > 0 \)

(c) \( \Re (\mu + v + k(\alpha + \beta)) + \sum_{i=1}^{r} (\alpha_i + \beta_i) \min_{1 \leq j \leq M_i} \Re \left( \frac{d^{(i)}}{d^{(i)}} \right) + \sum_{i=1}^{s} (\eta_i + \epsilon) \min_{1 \leq j \leq m^{(i)}} \Re \left( \frac{b^{(i)}}{\beta^{(i)}} \right) > 2 \)

(d) \( |\arg z_k| < \frac{1}{2} A_i^{(k)} \pi, \) where \( A_i^{(k)} \) is defined by (1.5); \( i = 1, \ldots, r \)

(e) \( |\arg Z_k| < \frac{1}{2} \Omega_i^{(k)} \pi, \) where \( \Omega_i^{(k)} \) is defined by (1.11); \( i = 1, \ldots, s \)

(f) \( b \notin (-\infty, 1) \) and \( \tilde{\alpha}_i, \tilde{\beta}_i, \tilde{\gamma}_i \in \mathbb{C}, i = 1, \ldots, m, \Re (\tilde{\alpha}_i) > 0 \)

(g) The series occuring on the right-hand side of (4.1) is absolutely and uniformly convergent.

Proof of theorem 1

First, expressing the generalized multiple-index Mittag-Leffler function \( E_{(\alpha_i) \cdot (\delta_i)}^{(\gamma_i) \cdot m} (zx^m) \) in serie with the help of equation (2.1), the Aleph-function of \( r \) variables in series with the help of equation (1.6), the general class of polynomial
of several variables \( S_{N_1, \ldots, N_t}^{M_1, \ldots, M_t} \) with the help of equation (1.22) and the Prasad’s multivariable I-function of \( s \) variables in Mellin-Barnes contour integral with the help of equation (1.9), changing the order of integration ans summation (which is easily seen to be justified due to the absolute convergence of the integral and the summations involved in the process) and then evaluating the resulting integral with the help of equation (3.1) and expressing the generalized hypergeometric function \( f_2 \) in serie ,use several times the following relations \( \Gamma(a)/(a)_n = \Gamma(a+n) \) and 
\( a = \frac{\Gamma(a+1)}{\Gamma(a)} \) with \( \text{Re}(a) > 0 \). Finally interpreting the result thus obtained with the Mellin-barnes contour integral, we arrive at the desired result. The proof of the theorem 2 use the similar methods.

The quantities \( U, V, W, X, A_r, B, A, B' \) and \( B' \) are defined by the equations (1.14) to (1.19)

5. Particular case

If \( U = V = A = B = 0 \), the multivariable I-function defined by Prasad degenerates in multivariable H-function defined by Srivastava et al [7]. We have the following results.

Corollary 1

\[
\int_0^{\infty} \frac{\sinh^{u-1} x (\cosh x + 1)^{v-1}}{b + \cosh x} \exp \left( \frac{y_1 X_{\delta_1, \mu_1, \rho_1}}{y_1 X_{\delta_1, \mu_1, \rho_1}} \right) \sum_{n=0}^{\infty} \sum_{k=0}^{\infty} \sum_{g_1=0}^{\infty} \sum_{g_r=0}^{\infty} \sum_{M_1}^{M_r} \sum_{M_r}^{M_r} \left( \frac{z_1 X_{\alpha_1, \beta_1, \gamma_1}}{z_r X_{\alpha_r, \beta_r, \gamma_r}} \right) \frac{(\cdots + G_r)}{\delta_1 \delta_2 \cdots \delta_{g_r} G_r!} \frac{b_k z^k}{k!} \eta_1 \eta_2 \cdots \eta_{g_r} \gamma_1 \gamma_2 \cdots \gamma_r - \frac{1-b}{2} n! \frac{2^\mu + \alpha k + \sum_{i=1}^{t} K_i \delta_i + \sum_{i=1}^{r} \alpha_i \eta_{G_i, g_i, \eta_i} + \rho + \beta k + \sum_{i=1}^{s} \beta_i \eta_{G_i, g_i, \eta_i} - \rho - \gamma k - \sum_{i=1}^{r} \rho_i K_i - \sum_{i=1}^{s} \gamma_i \eta_{G_i, g_i, \eta_i}}{2^\mu + \alpha k + \sum_{i=1}^{t} K_i \delta_i + \sum_{i=1}^{r} \alpha_i \eta_{G_i, g_i, \eta_i} + \rho + \beta k + \sum_{i=1}^{s} \beta_i \eta_{G_i, g_i, \eta_i} - \rho - \gamma k - \sum_{i=1}^{r} \rho_i K_i - \sum_{i=1}^{s} \gamma_i \eta_{G_i, g_i, \eta_i}}}
\]

6. Conclusion

In this paper we have evaluated a generalized finite integral involving the generalized multiple-index Mittag-Leffler function, the hyperbolic functions, the multivariable Aleph-function, a class of polynomials of several variables a sequence of functions and the multivariable I-function defined by Prasad. The integral established in this paper is of very general nature as it contains Multivariable Aleph-function, which is a general function of several variables studied so far. Thus, the integral established in this research work would serve as a key formula from which, upon specializing the parameters, as many as desired results involving the special functions of one and several variables can be obtained.
